PROJECTS

AI Powered Resume Screening and Ranking System | *Python, Flask, Scikit-learn, JavaScript, Chart.js*

- Built full-stack AI-based ATS system with hybrid scoring engine using NLP techniques (TF-IDF, cosine similarity, skill extraction) to rank resumes with improved matching accuracy.

Telecom Customer Churn Prediction System | *Python, Scikit-learn, XGBoost*

- Engineered and evaluated 3+ ML models (Logistic Regression, Random Forest, XGBoost), achieving up to 78% accuracy
- Boosted recall using SMOTE, class weighting, and threshold tuning to identify high-risk customers

Fruit and Vegetable Classifier | *Python, TensorFlow, Keras, Flask, OpenCV*

- Trained CNN model on 2000+ labeled images and optimized input data using OpenCV pre-processing techniques.
- Deployed real-time inference using Flask, reducing prediction latency and improving usability

Blockchain Based Herb Provenance System | *Solidity, Ethereum, Node.js*

- Designed decentralized herb supply chain solution using Ethereum blockchain with cryptographic hashing and digital signatures for tamper-proof data integrity
- Implemented Solidity-based smart contracts on HardHat enabling immutability, secure transaction validation, provenance tracking, and multi-party verification
